```
vcorella@ie0117:~/PROGRA/repositorios/LaboratorioGit$ git log --oneline --graph
* 5e69b12 (HEAD -> feature, origin/feature) Se esta cambiando el nombre del objeto gato1, de Sussy a Mabel
* 6e28549 Se esta agregando un nuevo objeto al codigo llamado gato3, de nombre Ruby, de color blanco y 1 año de edad
* 1640128 (origin/main, origin/HEAD) included gato2 and list printing
* c2b877a corrected mistakes
* d02a6d2 included gato1
* 7ab0adc included functions file
* a13fd08 first commit
```

3. Imágenes correspondientes al punto 8.

- oneline

 <hash> <title line>

 This is designed to be as compact as possible.

If the commit is a merge, and if the pretty-format is not oneline, email or raw, an additional line is inserted before the Author: line. This line begins with "Merge: " and the hashes of ancestral commits are printed, separated by spaces. Note that the listed commits may not necessarily be the list of the direct parent commits if you have limited your view of history: for example, if you are only interested in changes related to a certain directory or file.

There are several built-in formats, and you can define additional formats by setting a pretty.<name> config option to either another format name, or a format: string, as described below (see git-config(1)). Here are the details of the built-in formats:

- oneline

--graph
Draw a text-based graphical representation of the commit history on the left hand side of the output. This may cause extra lines to be printed in between commits, in order for the graph history to be drawn properly. Cannot be combined with --no-walk.

4. Imagen del punto 9.

```
vcorella@ie0117:~/PROGRA/repositorios/LaboratorioGit/gatosGit$ python3 gatos.py
Siri, 4 annos, color: negro
Pelusa, 3 annos, color: cafe
Ruby, 1 annos, color: Blanco
```
